

WiFi Dongle Instructions

Connect the Wi-Fi dongle to the USB Extension socket (as per Fig 1 for Smart PRO and Fig 2 for Smart LUX™).

Fig 1

Fig 2

Ensure the 90° USB plug is securely fitted into the USB socket on the PCB.

WiFi Dongle Instructions

WiFi WPS Pairing

1. Press and hold the BOOST button until the Primary LED flashes orange.
2. Release the boost button before the primary LED goes green.
3. Set the route to WPS mode.
(Refer to router instructions on how to do so).

The above process times out in 2 minutes and the LED will go RED if unsuccessful.

If pairing is successful, the main LED will flash Green for 5 seconds, before going White.

Hints & Tips:

Turning the router off then back on again can help the pairing process. Routers often require updates which can only happen when the router is powered on and off.

After a successful pairing process, the primary LED can continue to flash purple for a short period before changing to solid white. This happens while communication between the charger and router is established.
